CAREER OBJECTIVE

Aspiring Software Developer with a good understanding of HTML, CSS, JavaScript, Python, C, C++, and SQL. Gained hands-on experience in building dynamic websites and secured **2nd place** in the Frontend Fiesta competition. Passionate about continuous learning, with certifications in Python programming. Known for being detail-oriented, punctual, and a collaborative team player. Eager to apply my skills and grow as a developer while contributing to meaningful projects and delivering quality software solutions.

-

PROJECTS

- | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| ● Blog Website, Lead Developer
Description: Developed a dynamic blogging website with user account management, allowing users to read blogs without creating an account and upload blogs after registration. Designed to be responsive across devices, the website also features blog categorization, commenting, and advanced search functionalities. Utilized PHP, HTML, CSS, and phpMyAdmin to create an intuitive, user-friendly interface. | April 2020 - May 2020 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|

- **The Vintage Vault**

October 2024 - November 2024

Role: Full Stack Developer

Technologies: HTML, CSS, JavaScript, PHP, MySQL

Description: Developed a fully functional e-commerce platform dedicated to the buying and selling of antique items. Designed and implemented a user-friendly interface for both administrators and users, enabling seamless browsing, purchasing, and selling of vintage collectibles.
